

One Pager

Wall Street infrastructure for quant-grade prediction-market copy trading.

THE COMPANY

BETTER is the token-gated access layer for prediction-market alpha. We built the execution infrastructure that lets retail mirror elite quant wallets at institutional speed — closing a 30-second information gap to sub-millisecond latency. Custom validator nodes on Polygon and HyperEVM. Terminal closed beta live since Q1 2026.

THE PROBLEM

The End of the Casino. Perpetual futures were structurally rigged — market makers pulled liquidity, wicked stops, and harvested retail leverage. The FBI NexFundAI sting charged 18 entities. Casino fatigue created a capital vacuum.

The Beginning of Truth. Prediction markets settle on verifiable facts, not manipulation. Polymarket \$9B → \$14B → \$20B+. But structural disadvantages persist: **89% of retail PM wallets finish net negative.** The top 0.51% captures nearly all yield. Retail sees news 30 seconds after HFT algorithms. Copy trades fill 2–5 seconds late. Public mempool orders get sandwiched. Settlement is fair. Execution is not.

TRACTION (LIVE)

- **\$100K ARR** trailing 30-day token LP tax (2% buy/sell) · ~\$14M annualised terminal volume routed
- **155K/day** +EV signals surfaced (0.5ms mempool registry) across 7 archetypes: HFT UP/DOWN, Political, Weather, Sports, Entertainment, Tech, Crypto wallets
- **289** \$BETTER holder wallets (Dune) · **8** token contracts on Base · TGE 21 Jan 2026 · 709M supply
- 62 terminal users · 21 active trade users in April (+31% MoM) · Closed beta, token-gated, live production

THE MARKET

Prediction Market TAM: \$20B+ annual volume. Polymarket processed \$9B (2024) → \$14B (2025) → \$20B+ (2026e). Kalshi expands surface. **Adjacent Perp Conversion:** Hyperliquid HIP-4 brings \$270B annualised perp volume into prediction

markets — structural tailwind, not core TAM. **Macro-agnostic: event-driven alpha, not crypto-beta.** Zero terminals own their infrastructure. BETTER does.

THE TEAM

- **Ary Chhaya** (CEO) — Ainslie Wealth quant. Shipped terminal MVP solo. UTS MQF scholar.
- **Ankit Kapoor** (CTO) — Custom validator infra on HyperEVM + Polygon. Ex-TikTok, Jane Street offer.
- **Elijah Ho** (GTM) — 50K-member communities. 20+ multi-million dollar launches.

THE ASK

\$1,000,000 SAFE + Token Warrants · \$10M Valuation · 12 Months Runway

\$10M prices the operating company. Token FDV (~\$2.1M) reflects thin LP liquidity, not a priced round. Warrant value derives from post-TGE utility demand vs fixed supply, not current FDV mark.

ALLOCATION	%	AMOUNT
Growth + KOLs	42%	\$420K
Research	28%	\$280K
Founders (3 × \$50K)	15%	\$150K
Audit + Legal	10%	\$100K
Liquidity	5%	\$50K

Milestones: M4 HIP-4 live (\$10M volume) → **M6 HIP-4 Native Vault V1** (\$2.5M AUM) → M9 1K DAU → M12 +2 venues, Series A ready. *HIP-4 native vaults and copy trading are the immediate next milestone after M4.*
