

Wall Street infrastructure for socialised, quant-grade prediction-market copy trading.

BTC MARKET MAKER + \$30M PORTFOLIO MANAGER · JANE ST + TIKTOK ENGINEER
MICROCAP PRODIGY · ACTUARIAL SCIENCE + BLOCKCHAIN PHD
A QUANT-GRADE TEAM

\$1,000,000

PRE-SEED / SAFE + TOKEN WARRANTS
12 MONTHS OF RUNWAY

Retail is the yield source.

89%

of Polymarket retail wallets
finish net negative.

Top 0.51% captures the
remaining yield.

Dune Analytics on-chain forensic, 302 non-team holders, 2026-04-17. Cross-referenced with Cryptopolitan and Bitget research desks.

WHY THEY LOSE

Retail sees news 30 seconds after algorithms.
Copy trades fill 2 to 5 seconds late, at worse
prices.

Public mempool orders get sandwiched.

Positions held to maturity. Volatility never
captured.

Mirror the winners. At their speed.

LATENCY

Co-located execution on our own pruned Polygon nodes. We close the 30-second retail gap to sub-millisecond.

FILTERING

155,000 signals per day from elite Polymarket wallet activity and live orderbook flow. Five-factor confidence engine filters to the +EV ones.

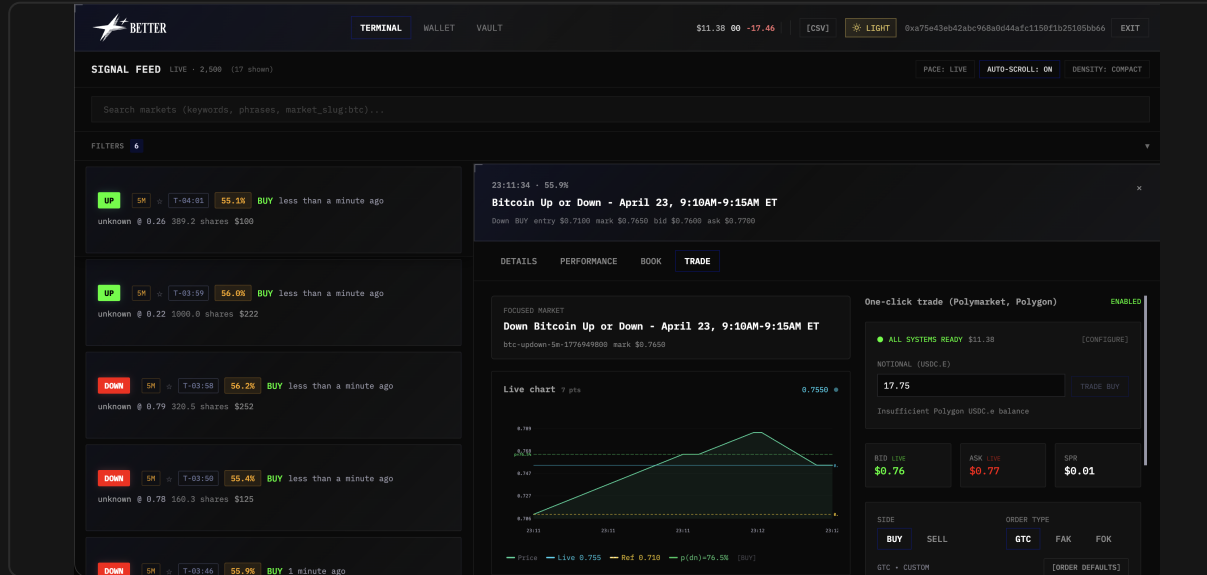

EXECUTION

One click to mirror. Gas-sponsored via Privy embedded wallets. Orders routed through our own mempool with built-in MEV protection.

Prediction markets are having their moment.

2024	Polymarket processes \$9B annual volume. \$3B on a single event.
LATE 2024	DoJ, FBI, SEC charge eighteen entities for crypto perps market manipulation. Casino fatigue validated.
Q1 2026	BETTER ships closed-beta terminal. Token-gated. First real trades routed.
MAR 2026	Hyperliquid processes \$22.5B monthly in perp volume. HIP-4 testnet live. Mainnet within 2026. BETTER is Day-0 ready to route.
APR 28 2026	Polymarket V2 cutover. PolyUSD collateral live. Institutional rails go on.
2026-28	Analysts project \$20B+ annual Polymarket volume. Kalshi, Opinion.xyz, HyperEVM HIP-4 expand category.

A terminal, not a pitch deck.

155K /day

+EV SIGNALS SURFACED. CAPACITY 1B/DAY.

\$100K ARR

TRAILING 30-DAY PROTOCOL FEES, ANNUALISED.

270+

\$BETTER HOLDERS ON BASE. JAN 2026 TGE.

Closed beta

TOKEN-GATED SINCE Q1 2026. LIVE PRODUCTION.

\$100K TRAILING 30-DAY ARR

~\$14M ANNUALISED VOLUME ROUTED

155K +EV SIGNALS PER DAY

We will house the informed flow on Polymarket and Hyperliquid HIP-4 to route their 6-7 figure weekly volume via our mempool-grade signal and execution layer. Several closed-beta members have doubled or tripled their bankrolls. Hyperdash runs the same power-user economics on Hyperliquid perps. Prediction markets deserve the same stack.

What we own, others pay for.

1.5-5 sec

PRE-BLOCK WINDOW

Our own validator nodes on HyperEVM and Polygon read the mempool one and a half to five seconds ahead of every public endpoint on earth.

Methodology: measured against top public RPC providers, 24-hour rolling sample, HyperEVM + Polygon.

0.6 ms

TICK-TO-TRADE

Median latency from mempool read to Polymarket order finality. Three hundred times faster than a public RPC path.

Methodology: production telemetry median, mempool decode to order hash confirmation.

2 / 2 chains

COVERAGE

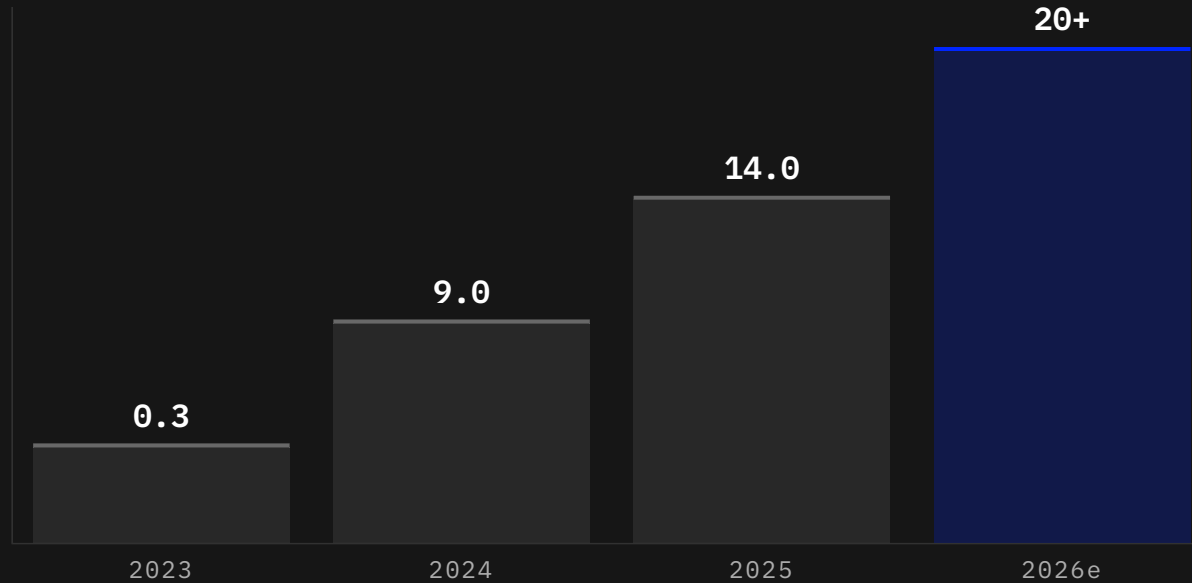

Custom validators, byte-level decoders, mempool firehose on both HyperEVM and Polygon. First production read of HIP-4 at this granularity.

Methodology: infrastructure built in-house, not rented. No third-party dependency in the signal path.

We have asked elite market makers what they run. They run a consumer-grade version of what we built in-house. On HyperEVM and Polygon, there is no one between us and the chain.

\$270B market. Zero owned infrastructure. Until now.

POLYMARKET ANNUAL VOLUME, \$B

Source: Dune Analytics on-chain volume aggregator. 2026 estimate is conservative relative to V2 institutional uplift. TAM expands further with Kalshi, Opinion.xyz, HyperEVM HIP-4.

\$270B

Hyperliquid annualised perp volume. HIP-4 drops prediction markets into the same margin engine. First terminal to route HIP-4 takes the Hyperdash-for-prediction-markets position.

0

Trading terminals that own their own infrastructure. Hyperliquid runs its own stack. We built ours for prediction markets.

3

Revenue streams open to BETTER: routing fees, vault AUM, B2B infrastructure. Model in data-room section 05.

Three streams. Compounding sequence.

LIVE · Q1 2026

Protocol trading fees.

Every mirrored order routes through BETTER. We take a thin fee on volume, tier-scaled by \$BETTER holdings. Trailing 30-day rate: \$100K ARR from token fees alone. Grows linearly with DAU and routed volume.

MONTH 6 · IN BUILD

Vault management.

ERC-4626 vaults curated by BETTER's signal engines. 2-and-20 structure. Curator entity incorporated in Panama. Audited before deposits open. Token-warrant holders get first access.

YEAR 2+ · ROADMAP

B2B infrastructure.

Mempool firehose, signal pipeline, execution API licensed to other prediction-market venues and funds. The infrastructure we built for ourselves ships as a product once the terminal has proven it.

Token economics compound the same incentive at every tier: hold more, pay less, trade more, pay more in total. The full twelve-year revenue schedule is modelled in the data room.

Quant. Infrastructure. Distribution.

Ary Chhaya

FOUNDER / CEO

PRIOR Ainslie Wealth quant. Ran \$500K BTC futures book at 15% weekly ROI from market-making.

PRIOR Co-founder, UP AI Project. +423.74% ROI over 6 months of live production, 1,600+ traders.

TRAINING UTS MQF scholarship 2026. BSc Actuarial, ANU.

AT BETTER Shipped terminal MVP solo in four months. Quant + capital markets lead.

Ankit Kapoor

CO-FOUNDER / CTO

AT BETTER Blockchain tech lead. Custom validator infrastructure on HyperEVM and Polygon.

PRIOR Senior Cloud Specialist (AWS), Kipanga. Production infra on Terraform + CDK.

PRIOR SWE, TikTok Trust & Safety. Jane Street internship offer.

TRAINING USYD MPhil Cryptography & Blockchain. Denison Research Scholar 2024.

Elijah Ho

CO-FOUNDER / GTM

AT BETTER GTM owner. Community engine. KOL programme. Narrative and launch strategy.

PRIOR Managed token communities totalling 50,000 members across Solana and BNB.

PRIOR Twenty-plus multi-million dollar project launches. Six figures from active trading in under twelve months.

TRAINING Bachelor Civil Engineering (current). Distribution operator by obsession.

Quant, infra, distribution. All three seats filled. Full bios in data-room section 07.

THE LANDSCAPE

Nobody in the top-right quadrant.

<p>TOP-LEFT · DEEP, SINGLE-VENUE</p> <p>Hyperdash</p> <p>Hyperliquid-only. \$1.2B routed annually. No prediction-market coverage. No mempool edge on HyperEVM. No Polymarket.</p>	<p>TOP-RIGHT · OWN INFRA + MULTI-VENUE</p> <p>BETTER</p> <p>Custom validators on HyperEVM + Polygon. 1.5-5s pre-block edge. Polymarket routed today, HIP-4 Day-0 ready. Cross-venue signal aggregation M12.</p>
<p>BOTTOM-LEFT · DIY / SELF-HOST</p> <p>OctoBot, API wrappers</p> <p>Open-source Polymarket copy bots. Self-hosted. No validator infrastructure. No latency guarantees. Unsupported past the hobbyist tier.</p>	<p>BOTTOM-RIGHT · CONSUMER / READ-ONLY</p> <p>Fireplace.gg, PolyPredict AI, Polymarket UI</p> <p>Analytics, social layer, native UI. No execution moat. No mempool access. Read-mostly tooling on top of public Polymarket data.</p>

	HYPERDASH	FIREPLACE.GG	OCTOBOT	POLYMARKET UI	BETTER
Own validator nodes	-	-	-	-	✓
1.5-5s pre-block mempool edge	-	-	-	-	✓
HyperEVM + HIP-4 coverage	HL perps	-	-	-	✓ first
Polymarket execution routing	-	read-only	self-host	native	✓
Cross-venue signal aggregation	-	-	-	-	✓ M12
Quant-grade team depth	founder-led	consumer	open-source	product	✓
Brand recognition	strong	moderate	low	dominant	early
Polished UX / onboarding	shipped	consumer	moderate	first-party	in beta

The infrastructure we built in-house is the one elite market makers wish they were running. Nobody else runs 1.5-5 second pre-block on two chains.

What the capital buys.

\$1,000,000 SAFE + TOKEN WARRANT / 12 MONTHS OF RUNWAY

SAFE	Standard YC post-money. Converts at the priced Series A. Operating entity under counsel review (Aurum LLP). BVI / Panama candidates. Incorporation finalised pre-SAFE close .
TOKEN WARRANT	Pro-rata claim on \$BETTER at a fixed discount to TGE pricing. Vests alongside team tokens, locked under the same schedule.
US REG POSTURE	BETTER is a routing layer, not a venue. Geofenced at the product layer. Polymarket federally legal since 2025 (CFTC / QCX). Kalshi federal preemption upheld over New Jersey and Arizona, 2026. DOJ and CFTC probes dropped July 2025.

FOUR MILESTONES AGAINST THE \$1M

M4	HIP-4 LIVE	\$10M cumulative volume routed, HyperEVM mempool shipped.
M6	VAULT V1	\$2.5M AUM , 50 depositors, independent audit, Panama curator entity live.
M9	TRACTION	1,000 DAU , 500K signals per day, 15% MoM cohort retention.
M12	+2 VENUES	Cross-venue signal aggregation live. Series A ready.

USE OF FUNDS

42%	28%	15%	10%	5%
GROWTH + KOLS	RESEARCH	FOUNDERS	AUDIT + LEGAL	LIQUIDITY
community, narrative, paid acquisition	signal quality, backtesting, data infra	3 × \$50K/yr, 12 months	vault audit, counsel, compliance	vault seed, routing reserves

Founders on \$50K each. Minimum to stay fully committed. Every other dollar into the business.

What the quant captures, the retail loses.
That is not malice. That is engineering.

The engineering is **ours**. What remains is capital and
time.

\$1M buys us both.

Five years from this SAFE, BETTER is the execution layer beneath every prediction-market trade
routed on-chain. The retail side, closed. The infrastructure, ours to license.
